The following is an examiner's statement of reasons for allowance:

The prosthetic hip joint comprising: an acetabular cup having a sintered polycrystalline diamond compact, a substrate located thereon, a gradient transition zone between the cup substrate layer and the acetabular cup diamond compact, a femoral head for articulation against the load bearing and articulation surface of the cup, said femoral head including a sintered polycrystalline diamond compact, first and second femoral head substrate layers located on said femoral head polycrystalline diamond

compact, a second femoral head substrate layer located on said femoral head polycrystalline diamond compact, a gradient transition zone between said first femoral head first substrate layer and said head diamond compact was found to be novel.

Kyocera Corp. (JP 09173437) did teach multiple substrate layers using diamond on the articulation surface of a femoral head, but did not disclose a combination of a complete prosthesis having a femoral head and a corresponding acetabular cup with both parts containing diamond compact thereon.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
